

# Postgres Plus® Standard Server

Open Source | Performance | Scalability

## Version 9.0 now available with:

- **Streaming Replication** – for lightening fast backups and ever ready HA setups
- **Hot Standby** – uses backup slaves for reporting improving overall performance
- **Pg\_Upgrade** – reduces multi-hour version upgrades to minutes!

**Postgres Plus Standard Server** is made for developers and smaller organizations in need of a robust relational database that is quick and easy to install, ready to handle a variety of transaction and reporting work profiles, and able to scale for large user and data loads.

“EnterpriseDB allows us to bring the benefits of open source to all our customers, large and small, without sacrificing the quality or performance of our retail management solution.”

Eric Olafson  
Chief Executive Officer  
Tomax

## PRODUCT HIGHLIGHTS

### Professional One-Click Installer

Install, configure, tune, and start using your Postgres database in minutes.

### Feature Packed Enterprise Modules

All our modules are built, packaged, tested, together, and delivered together saving you weeks of time in managing your configuration.

### StackBuilder Plus with UpdateMonitor

Build out and manage your database features module by module and be notified when updates are available for your modules.

### Value Added Tools

SQL/Protect adds SQL Injection guards, xDB Replication Server allows sophisticated replication for reporting, and much more.

### Top Quality Documentation

One stop shopping for PostgreSQL, pgAdmin, and enterprise module documentation - plus you can always read the source!

## Why Choose Standard Server?

### Cost Savings Cost Savings Cost Savings

Open source Postgres Plus Standard Server is license fee free! You pay only for services you choose: such as a Software Subscription with break/fix support, Administration Training, or services for special needs like Partitioning, High Availability, Monitoring Setup and many more.

### Pre-Bundled Enterprise Modules

Standard Server delivers test certified PostgreSQL in a platform specific one-click binary installer making open source software acquisition, installation, and upgrades a simple and fast task. There are no time consuming downloads, build environments, compiling, testing and configuring to worry about.

### Installation Tuning

Two install time questions for hardware utilization and application profile pre-tune your installation out-of-the-box for a worry free setup that will last.

### Certification Testing

Each platform build is tested by the EnterpriseDB Quality Management Group for installation and operational integrity. And StackBuilder Plus modules are tested for cross module dependencies.

## Key Database Features

- Linux 32 and 64 / Windows support
- Full ACID compliance
- ANSI SQL and constraints support
- MVCC (Multi-Version Concurrency Control)
- User Defined Data Types and Views
- SQL / XML support
- Primary and Foreign keys (with constraints)
- Inheritance
- Rules Engine (Query Re-write)
- Rich indexing options
- Data and index partitioning
- Database Links
- Function based Indexes
- Full Text Search
- Advanced encryption
- SSL, LDAP Security Authentication
- Parallel Restore & Point-In-Time Recovery
- MySQL Database Migration
- Visual development and test tools
- Triggers and stored procedures
- Nested transactions and two phase commit
- Windowing aggregate functions
- Much much more!
